Veterinarian EHR. Everyday uses and operations to stay on top of your Vet needs.

Add a Vet

To add a vet to your system. Use the File -> Add Vet

You will be prompted to enter First Name and Last Name.

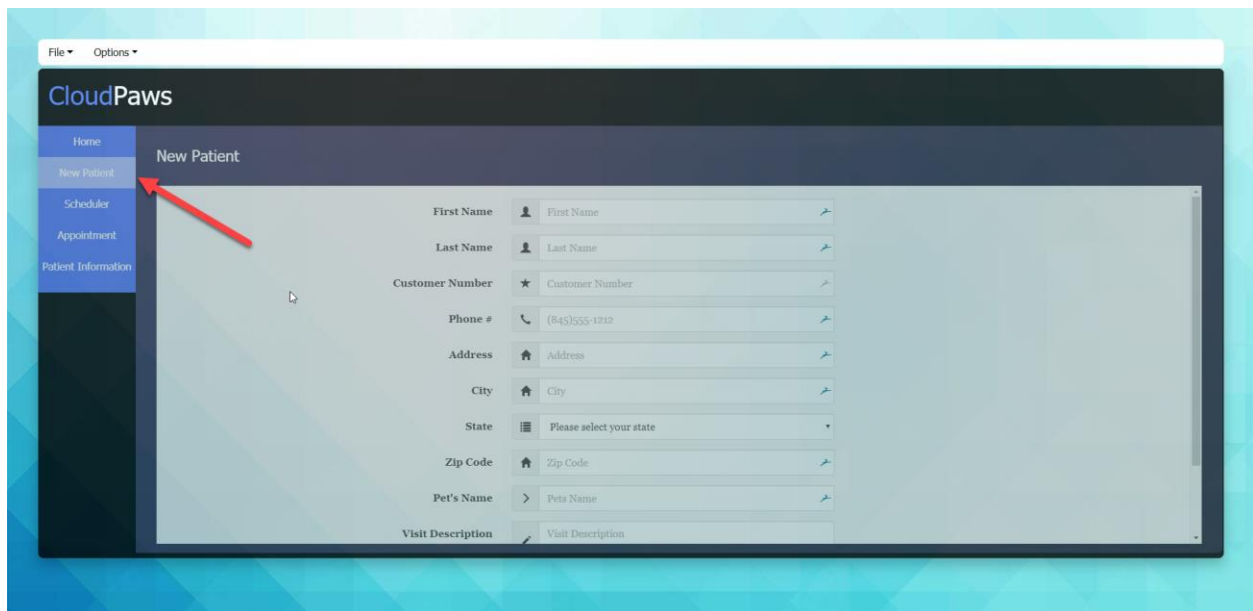

Add Patient

To add a patient, click on the “New Patient” in the left-hand navigation bar.

From here you will be prompted with the necessary information it takes to add a patient to the database.

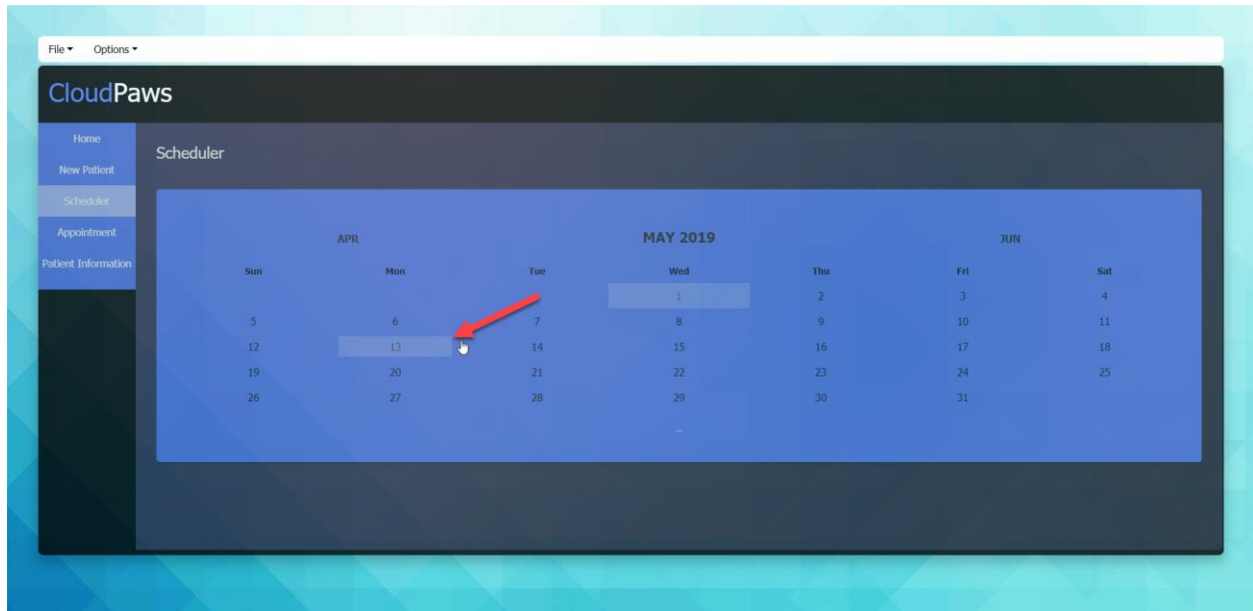

Add patient to Scheduler

To Add a patient to the scheduler, click on "Scheduler" in the left-hand navigation bar.

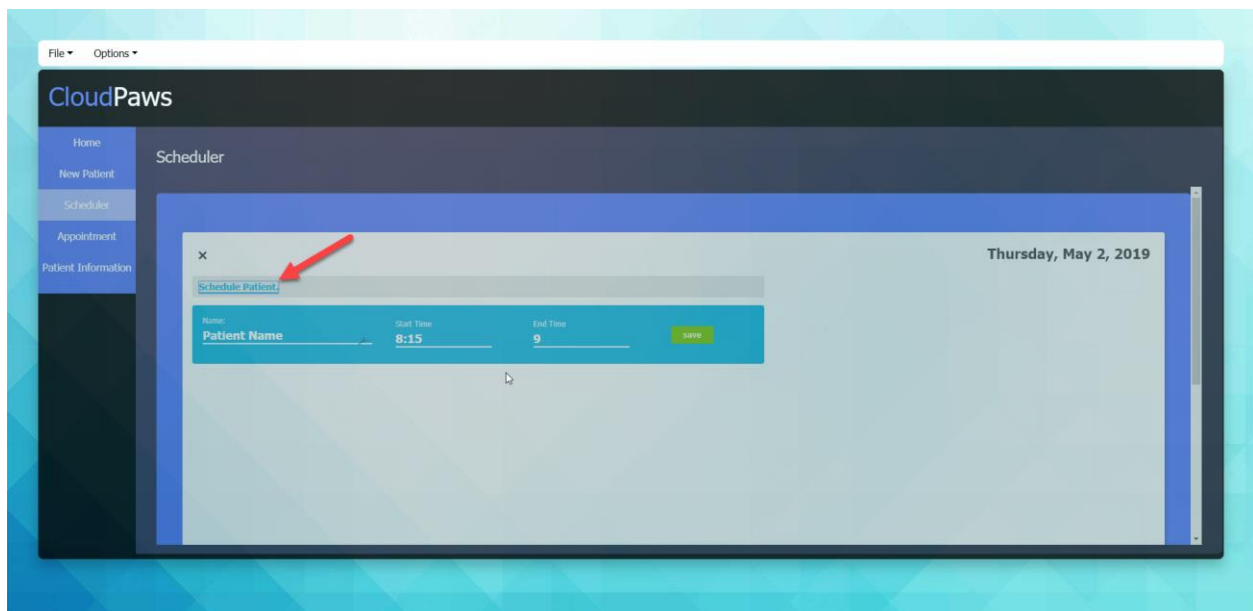

From there click the day that you need to schedule

Click "Schedule Patient"

Enter name and time.

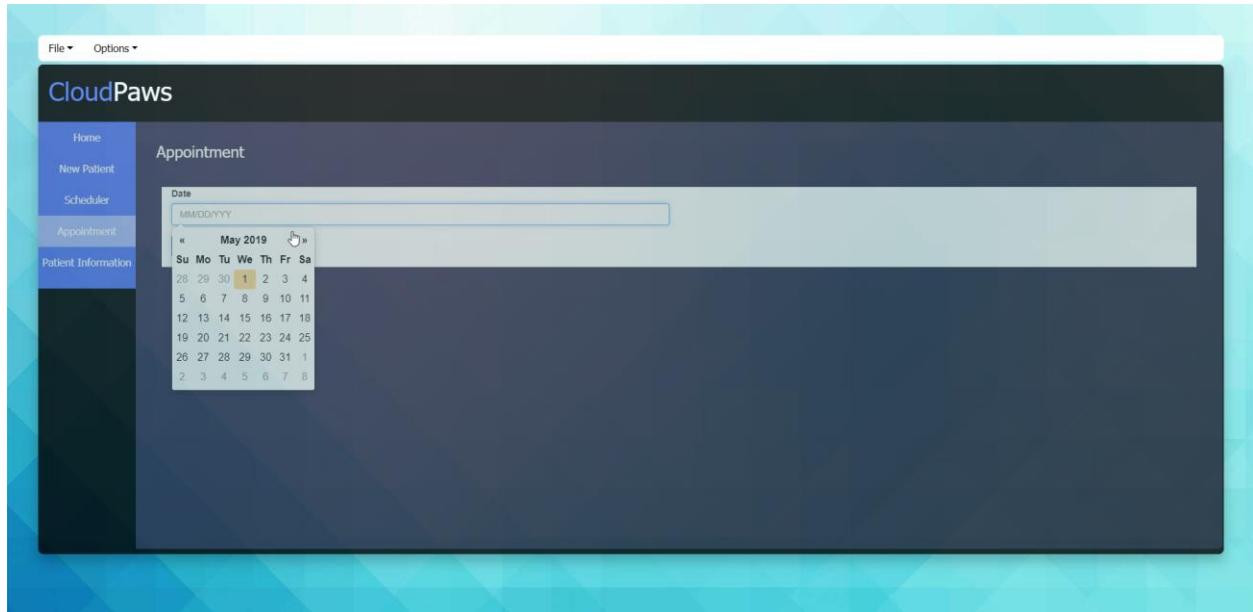

*Please see References and Credit section

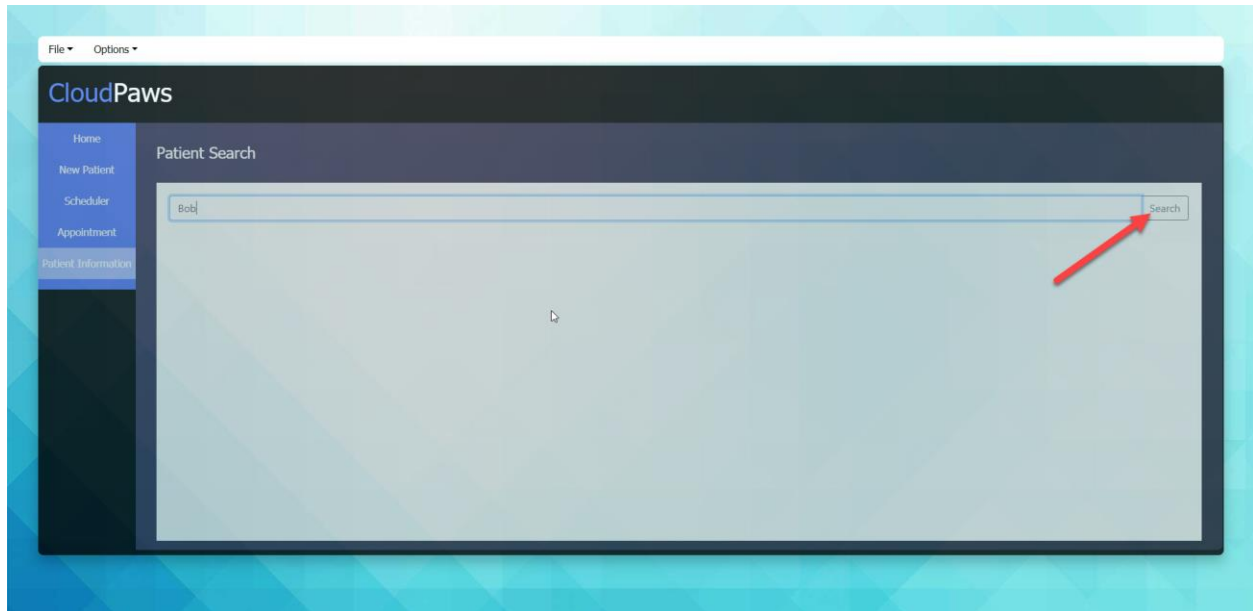

Lookup Appointments for Given day

To find appointments for a given day, click "Appointments" in the left-hand navigation bar
From there find your day and hit Enter.

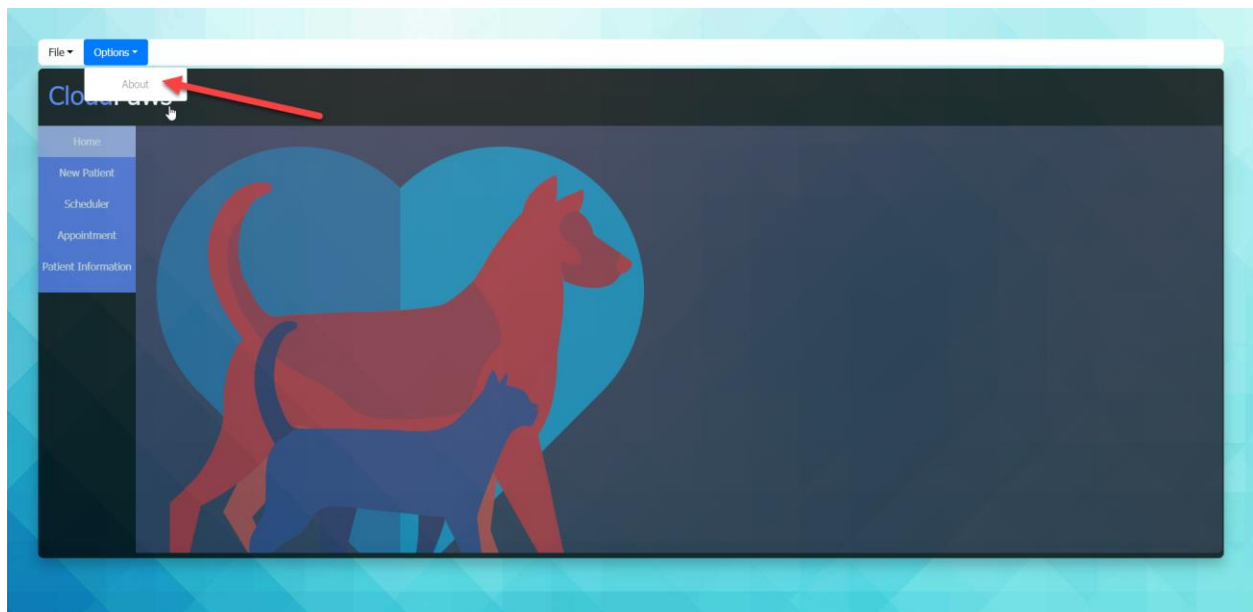

Search for patient in database

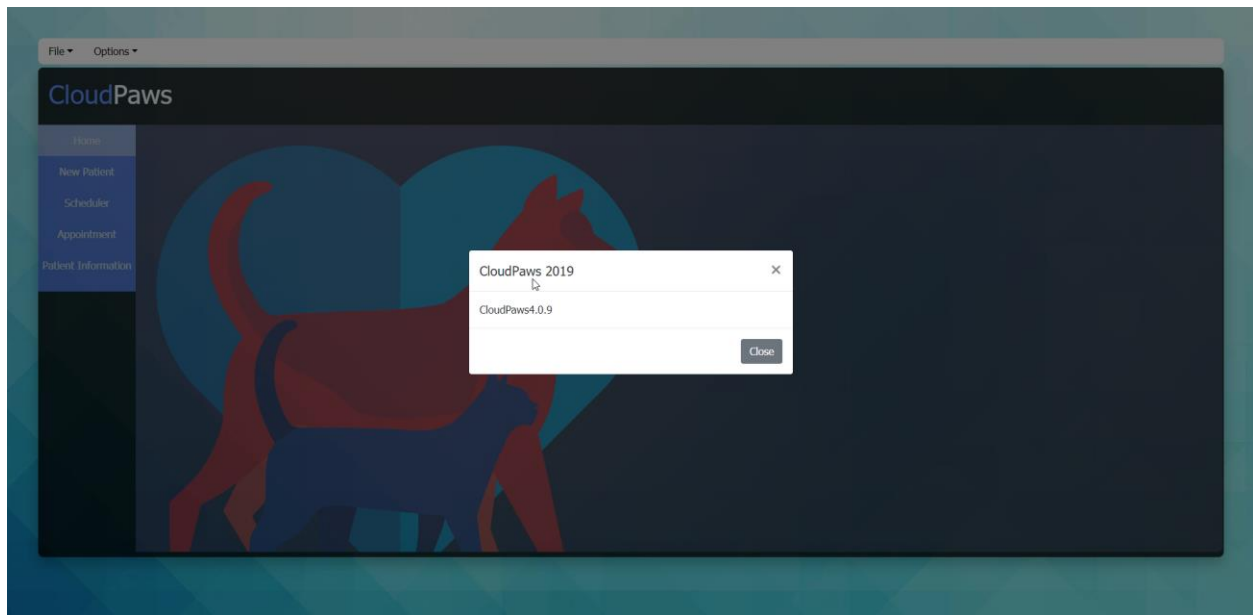

Click "Patient Information" in the left hand navigation bar
From there enter patient name and click search

Find Product Version

To find the product version that you are running click Options -> About

Resources and Credit

*Calendar interaction was used from template found at:

<https://bootsnipp.com/tags/calendar?page=1>

The design was adjusted and interaction adjusted to write to a database.

Strictly the UI was the only part used.
